

beyonnex.io is paving the way for smart real estates

We support our customers in making buildings more climate-friendly, more comfortable and more affordable -- with connected real estate, simple products and high processing and service quality.

We provide our customers with efficient, tailored processes and applications for operating IoT infrastructures in real estate, as well as our flexible Enterprise-IoT-Suite, in which we manage data from many millions of sensors into intelligent products and services.

We're looking for new colleagues to join our journey as

(Senior) Frontend Developer (m/f/d)

Your job opportunity

With a team of product and IT experts, the future position holder will be responsible for further developing beyonnex's Enterprise-IoT-Suite and services to ensure a stable and scalable technological foundation for the strategic development of the group of companies. In addition, the following tasks will be part of your position

- You will become a member of one of our engineering teams, building products of the Beyonnex ecosystem
- You will be involved in every part of the frontend software engineering process and in the lifecycle of the services that your team is building - design, development, testing, deployment, maintenance, operations and improving software based on user feedback and usage metrics
- You will work closely with our product experts to iteratively improve our products and services by conceiving, refining and delivering new ideas.

What we need from you

We are searching for a motivated candidate with following qualifications:

- At least 3 years professional experience as a software developer in projects with web and mobile frontends
- Proficiency in multiple front-end languages (React, Flutter, Vue, Angular, jQuery)
- Bachelor's degree in Computer Science or related fields or comparable education and up to date with current UI/UX design principles
- Practical experience working in agile development teams
- Curiosity and the ability to learn fast
- Problem-solving mindset

Benefits are following skills and interests:

- Master or PhD in Computer Science or related fields
- Experience in creating robust SCSS/CSS libraries and expertise in responsive design programming (HTML, JavaScript, SCSS)
- Experience with design tools (Sketch, Adobe Creative Suite, Figma)
- Experience following a Test-Driven Development (TDD) approach
- Experience working with Cloud Service Providers (preferably AWS) and IoT Frameworks
- German Language skills are an additional plus

What we offer

In our hubs in Hamburg, Erfurt and Mannheim you will meet people from all over Europe. From different cultures, with different dialects, genders and lifestyles. We live diversity and openness in our everyday work.

When you ask anybody why they are working here, it is likely that people will say “because of the people” and “because I have never learnt so much in my life before”. Our company is a place to be yourself, aim high, taking care of each other and growing without limits.

Of course, we have a great office near Hamburg's city center, a place where you feel comfortable and have fun with your team members. But more importantly, we offer you a high degree of flexibility from where you work. We offer you the opportunity to work on challenging projects and to manage a complete large-scale project from inception to implementation and operation. You will have the opportunity to learn and work in a creative and respectful environment and build a fulfilling career in the technical field.

Do you want to become part of the team?

Send us your complete application documents (curriculum vitae and references) via email to jobs@beyonnex.io.

In case you have any questions about the offered position, your application or the application process, send us an email to jobs@beyonnex.io.

beyonnex.io is part of noventic group, a pan-European group of companies driving climate intelligent management of real estate. The independently operating noventic brands manufacture sensors, radio hardware and control devices, offer services for the operation of IoT infrastructures in real estate, and operate Enterprise-IoT-Suite as well as applications for the realization of climate goals, comfort and profitability. With around 890 employees, the company now realizes over € 200 million in sales and is considered the driver of innovation in the industry.
